Niels Malotaux

- Independent Engineering and Project Coach
- Expert in helping teams and organizations to quickly become
 - More effective - doing the right things better
 - More efficient - doing the right things better in less time
 - More predictable - delivering as needed
- Project rescue
- Embedded Systems architect (electronics/firmware)
- Project types
electronic products, firmware, software, space, road, rail,
telecom, industrial control, parking system

Quality On Time
Delivering
the Right Result
at the Right Time

The Importance of Time

Business Case (why are we doing it)

Return on Investment (ROI)

- + Benefit of doing - huge (otherwise we should do something else)
- Cost of doing - usually minor compared with other costs
- Cost of being late - lost benefit
- Cost of doing nothing yet - every day we start later, we finish later

Do you know the cost of one day of (unnecessary) delay ?

- What is the cost of your project per day ?
- What is your cost per day ?
Note: that's not what you get !
- If you don't know the benefit, assume 10 times the cost
- How can you make decisions, if you don't know ?

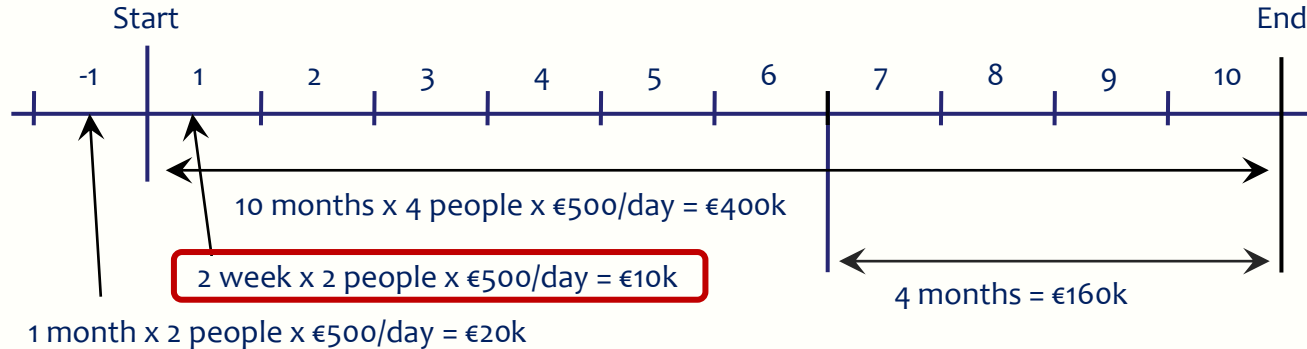

- Say £400 per day
- 5 people x £400 = £ 2000
- Cost of delay 10 x £2000 = £ 20,000

if 5x:

- Cost of delay 5 x £2000 = £10,000

Time vs Budget ? - VOIP introduction project

- We can save 4 months by investing €200k → “That’s too much !”
 - It’s a nicer solution - Let’s do 2 weeks more research on the benefits PO → “Don’t waste another 10k. Start working !”
 - What are the expected revenues when all is done? → €16M/yr (€1.3M/mnd)
 - So 2 weeks extra doesn’t cost €10k. It costs €16M/26 = €620k
 - And saving 4 months brings €16M/3 = €5M extra
- ➔ Invest that €200k NOW and don’t waste time !

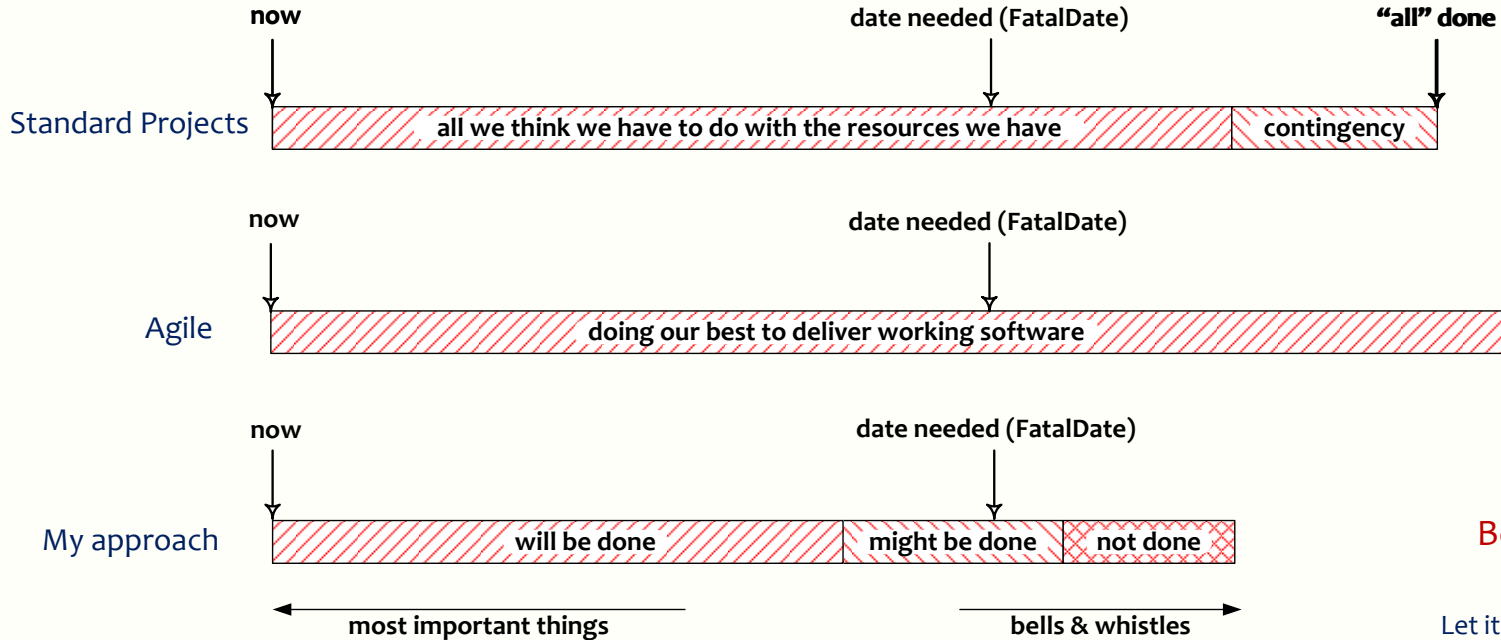

4 week project

How long do such projects usually take ?

TimeLine

How do we know that we do, and get,
what is needed, when it's needed?

Better 80% 100% done,
than 100% 80% done
Let it be the most important 80%

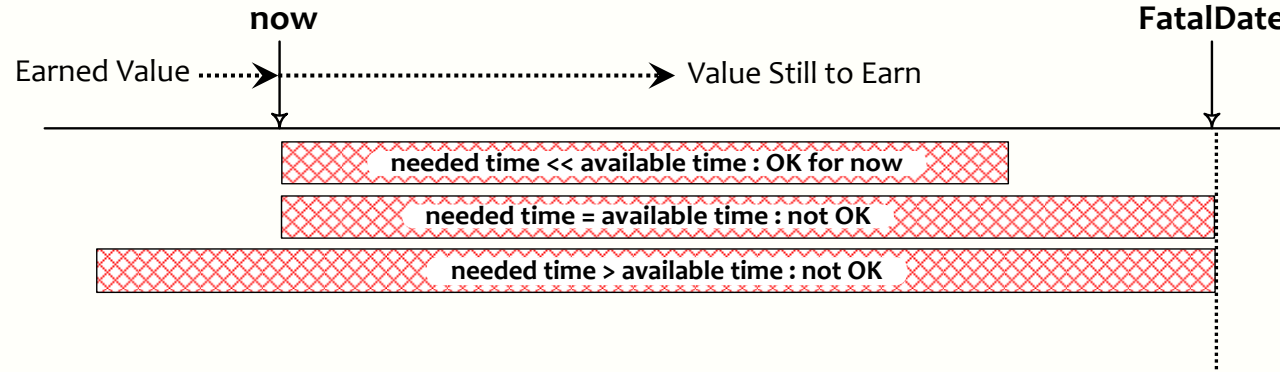

Ultimate Goal of a What We Do (for our salary)

Quality on Time

- Delivering the Right Result at the Right Time, wasting as little time as possible (= efficiently)

- Providing the customer with
 - what they need
 - at the time they need it
 - to be satisfied
 - to be more successful than they were without it
- Constrained by (win - win)
 - what the customer can afford
 - what we mutually beneficially and satisfactorily can deliver
 - in a reasonable period of time

At the time they need it

- Value Still to Earn
- versus
- Time Still Available

If the match is over, you cannot score a goal

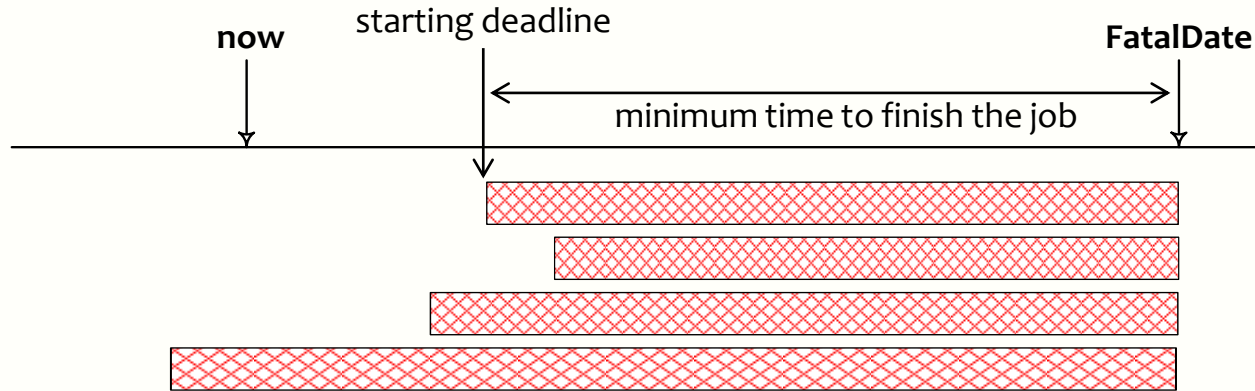

Even more important: Starting Deadlines

To meet Delivery Deadlines, focus on Starting Deadlines

Starting Deadline

- Last day we can start to deliver by the delivery deadline
- Every day we start later, we will end later

How to be on time

- Are your deliveries usually on time ?
- If yes, is the quality compromised for being on time ?
 - That's not 'on time' !
 - What we deliver should simply work
- How can we save time, without compromising quality ?
- 7 options

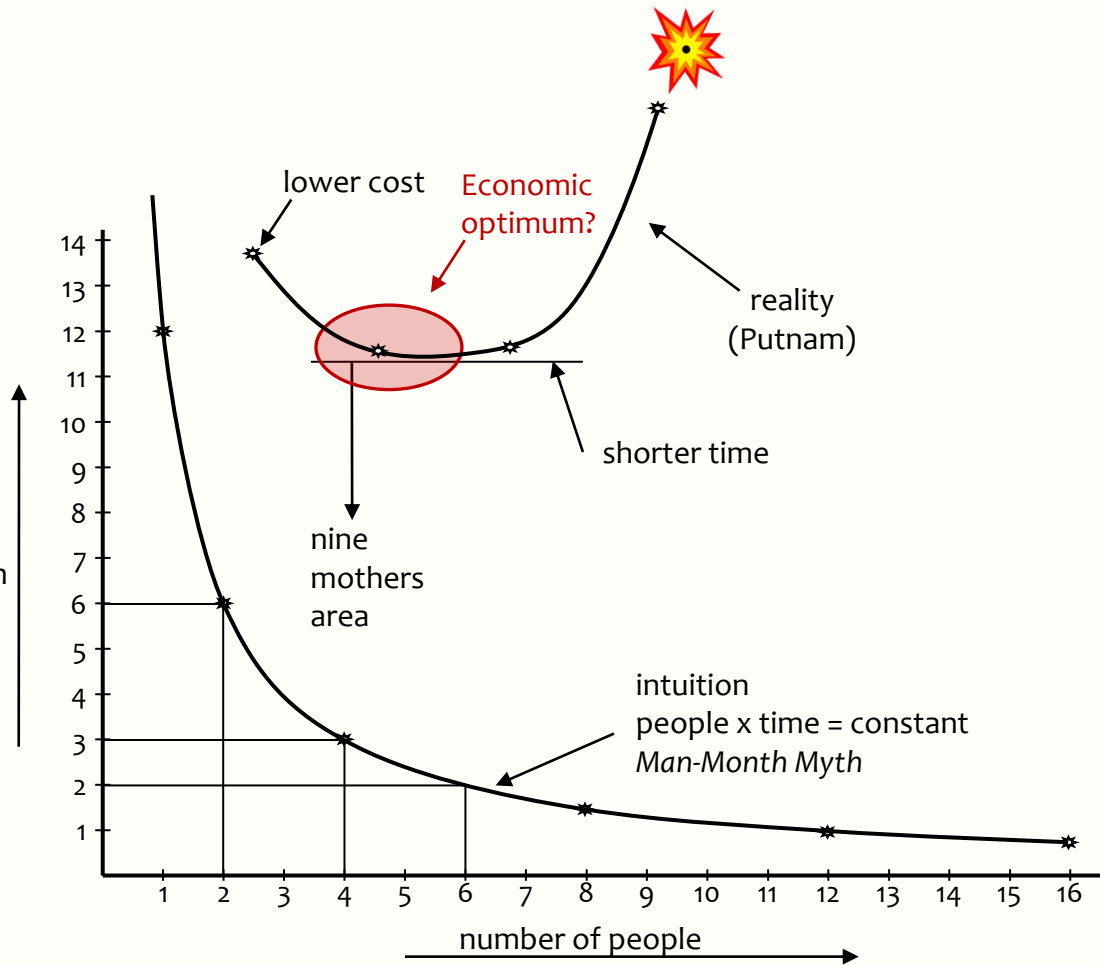

Deceptive options

1. **Hoping for the best** (fatalistic)
2. **Going for it** (macho)
3. **Working Overtime** (fooling ourselves and our boss)
4. **Moving the deadline**
 - Parkinson's Law
 - Work expands to fill the time for its completion
 - Student Syndrome
 - Starting as late as possible, only when the pressure of the FatalDate is really felt

5. Adding people

duration

Brooks' Law (1975)

Adding people to a late project makes it later

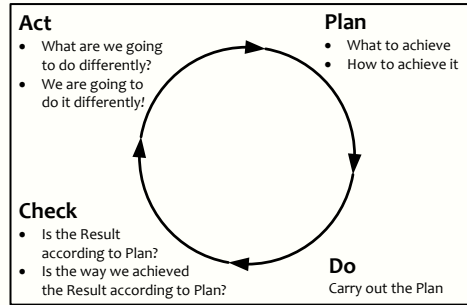

6. Saving time

Continuous
elimination of waste
(www.malotaux.eu/?id=essenceoflean)

We don't have enough time, but we can save time
without negatively affecting the Result !

- Efficiency in *what (why, for whom) we do* - doing the right things
 - Not doing what later proves to be superfluous
- Efficiency in *how we do it* - doing things differently
 - The product
 - Using proper and most efficient solution, instead of the solution we always used
 - The project
 - Spending less time, instead of immediately doing it the way we always did
 - Continuous improvement and prevention processes
 - Constantly learning doing things better and overcoming bad tendencies
- Efficiency in *when we do it* - right time, right order
- TimeBoxing - much more efficient than FeatureBoxing

(www.malotaux.eu/?id=evo)

(www.malotaux.eu/?id=designlog)

(www.malotaux.eu/?id=projectmanagement)

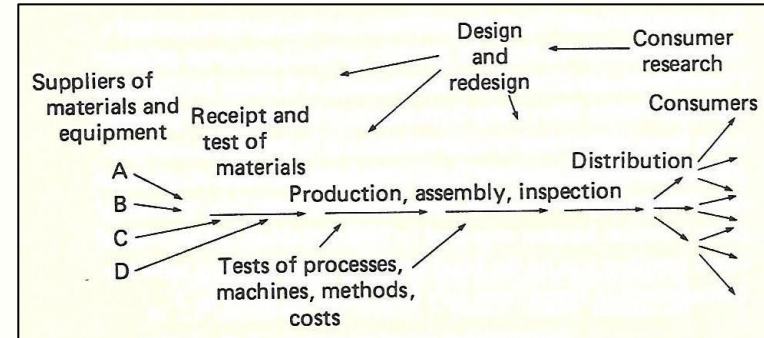

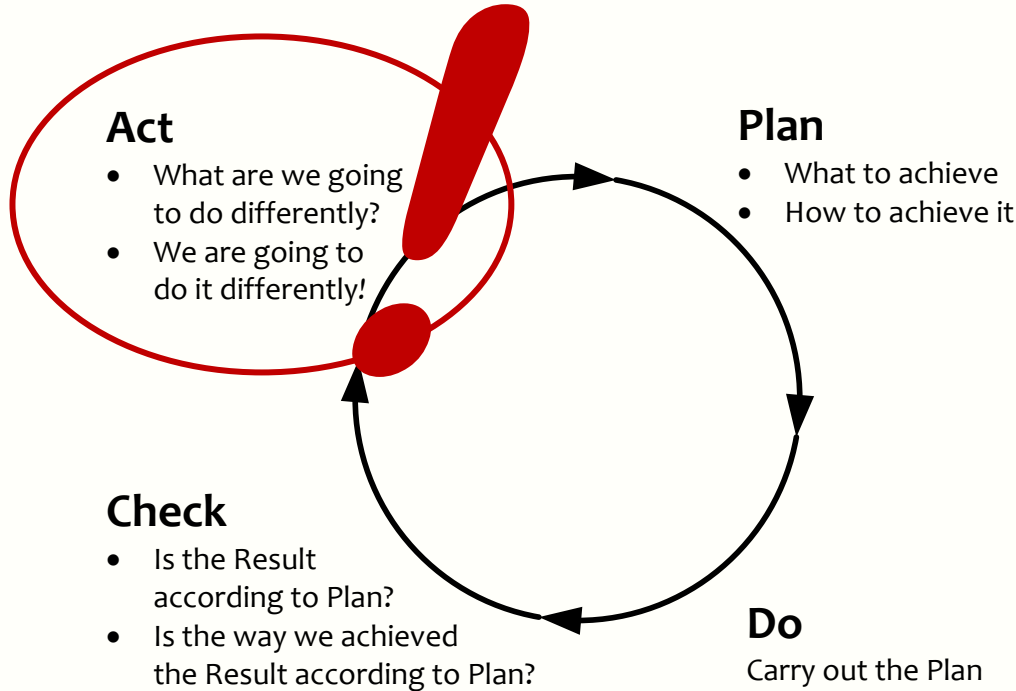

(www.malotaux.eu/?id=PDCA)

(www.malotaux.eu/?id=timeline)

(www.malotaux.eu/?id=timeboxing)

The secret weapon: PDCA

(Shewhart Cycle - Deming Cycle - Plan-Do-Study-Act Cycle - Kaizen)

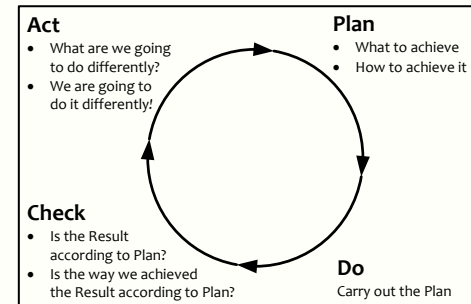

Deming: Out of the Crisis

Quality costs less

- Half of what we tend to do in our work, later will prove not to have been needed
 - If we see that after spending the time, the time is already wasted
 - If we see that before we spend the time, we still can decide not to waste the time
- If we save time, we have more time to do the right things right
- Doing things wrong, costs about *three times* as much as doing it right the first time
- Quality costs less
- We know we're not perfect, that's why we use PDCA

Plan-Do-Check-Act

- The powerful ingredient for success

Business Case

- Why we are going to improve what

Requirements Engineering

- What we are going to improve and what not
- How much to improve: quantification

Architecture and Design

- Selecting the optimum compromise for the conflicting requirements

Early Review & Inspection

- Measuring quality while doing, learning to prevent doing the wrong things

Weekly Task Cycle

- Short term planning
- Optimizing estimation
- Promising what we can achieve
- Living up to our promises

Bi-weekly Delivery Cycle

- Optimizing the requirements and checking the assumptions
- Soliciting feedback by delivering Real Results to eagerly waiting Stakeholders

TimeLine

- Getting and keeping control of Time: Predicting the future
- Feeding program/portfolio/resource management

Evolutionary Delivery elements

Tom Gilb

(Evo)

Why

What

as early as possible

Zero
Defects
Attitude

Evo Planning - Niels

Efficiency
of what we do

Effectiveness
of what we do

What will happen, and
what will we do about it?

Requirements with Planguage

ref Tom Gilb

quantifying the goal

SMART

Definition:

RQ27: Speed of Luggage Handling at Airport

Scale: Time between <arrival of airplane> and first luggage on belt

Meter: <measure arrival of airplane>, <measure arrival of first luggage on belt>, calculate difference

Specific
Measurable

Benchmarks (Playing Field):

Past: 2 min [minimum, 2023], 8 min [average, 2023], 83 min [max, 2023]

Current: < 4 min [competitor y, May 2023] ← <who said this?>, <Survey April 2023>

Record: 57 sec [competitor x]

Wish: < 2 min [2026Q3, new system available] ← CEO, 19 Jan 2024, <document ...>

Attainable

Requirements:

Time

Tolerable: < 10 min [99%, Q4] ← SLA

Traceable

Tolerable: < 15 min [100%, Q4, Heathrow T4] ← SLA

Goal: < 15 min [99%, Q2], < 10 min [99%, Q3], < 5 min [99%, Q4] ← marketing

Realizable

Tom Gilb quote

- The fact that we can set numeric objectives, and track them, is powerful, *but in fact it is not the main point*
- The main purpose of quantification is to force us to *think deeply, and debate exactly*, what we mean
- So that others, later, *cannot fail* to understand us

Quality

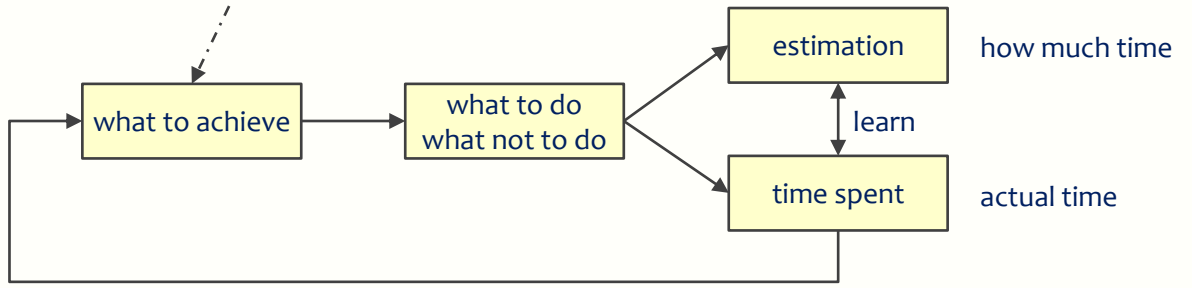

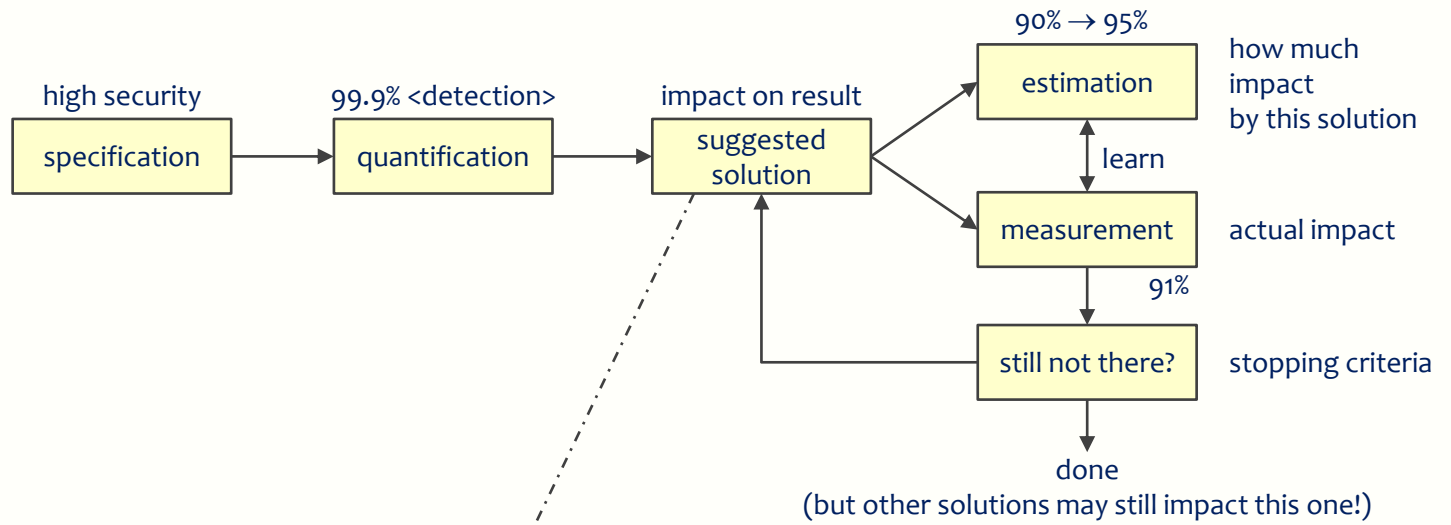

organising the

- what
- why
- for whom
- how much

on Time

organising the

- how
- when

Weekly TaskCycle

quantifying the way to get there

- How much time do we have available
- 2/3 of available time is net plannable time
- What is most important to do
- Estimate effort needed to do these things
- Which most important things fit in the net plannable time (default 26 hr per week)
- What can, and are we going to do
- What are we *not* going to do
- *Write it down ! Our fuzzy mind isn't good enough !*

2/3 is default start value
this value works well with development work

Evolutionary Project Management elements (Evo) – Tom Gilb

- **Plan-Do-Check-Act**
 - The powerful ingredient for success
- **Business Case**
 - Why are we going to improve what
- **Requirements Engineering**
 - What we are going to improve and what not

| Task _h | 4 | ↓ do not |
| Task _j | 3 | |
| Task _k | 1 | |

Making best use of limited available time

- After the work, the time is already spent
- Before the work, we still can decide
 - What is really important
 - What is less important
 - What we must do
 - What we can do
 - What we are going to do
 - What we are not going to do
- Therefore we plan first, instead of finding out later
- We cannot change history, only improve the future

Tasks feed Deliveries

| XMLa | 3 |
| XMLb | 3 |
| ... | |

What would have happened if we wouldn't have *designed* this delivery?

Every week: reflecting and prelecting

- Was all planned work really done?
- If a Task was not completed, we learn:
 - Time spent but the work not done? → effort estimation problem
 - What did I think then, what do I know now, learn (Check and Act)
 - Time not spent? → time management problem
 - Too much distraction
 - Too much time spent on other (poorly-estimated) Tasks
 - Too much time spent on other things
- Close unfinished Tasks after having dealt with the consequences
 - Feed the disappointment of the “failure” into your intuition mechanism
 - Define remaining Tasks, and put on the Candidate Task List
 - Declare the Task finished after having taken the consequences
- Continue with planning the Tasks for the next week

Immediate consumption of metrics

Why is this important ?

- TaskCycle Planning is **not** just planning the work for the coming week
- It exposes issues immediately
- Half of what people do in their work later proves to have been unnecessary
- During the TaskCycle planning we can very efficiently see
 - What our colleagues think they're going to do
 - Make sure we're all going to work on the most important things
 - Not on unnecessary things
 - In line with the architecture and design
 - Leading most efficiently to the goal of the delivery
 - Everyone knows exactly what's going to happen, what not, and why

| Cycle | Task cycle due date | ~Pri | Who | hrs | Done | Taskname | |

Right Time

Zero Defects video: www.youtube.be/INumgmYZ9R8

No excuse anymore !

- Delivering Quality on Time isn't really difficult
- I showed you some examples of how to do it
- So, there is no excuse anymore
if you're not sure, just ask !
- From now on: just deliver the Right Results at the Right Time
- No complaining or excuses
- Magic Mantra:

What are we going to do about it ?!

- 1 Evolutionary Project Management Methods (2001)
Issues to solve, and first experience with the Evo Planning approach
- 2 How Quality is Assured by Evolutionary Methods (2004)
After a lot more experience: rather mature Evo Planning process
- 3 Optimizing the Contribution of Testing to Project Success (2005)
How Testing fits in
- 3a Optimizing Quality Assurance for Better Results (2005)
Same as Booklet 3, but for non-software projects
- 4 Controlling Project Risk by Design (2006)
How the Evo approach solves Risk by Design (by process)
- 5 TimeLine: How to Get and Keep Control over Longer Periods of Time (2007)
Replaced by Booklet 7, except for the step-by-step TimeLine procedure
- 6 Human Behavior in Projects (APCOSE 2008)
Human Behavioral aspects of Projects
- 7 How to Achieve the Most Important Requirement (2008)
Planning of longer periods of time, what to do if you don't have enough time
- 8 Help ! We have a QA Problem ! (2009)
Use of TimeLine technique: How we solved a 6 month backlog in 9 weeks
- 9 Predictable Projects (2012) - How to deliver the Right Results at the Right Time
- RS Measurable Value with Agile (Ryan Shriver - 2009)
Use of Evo Requirements and Prioritizing principles

How to deliver Quality on Time

Delivering the Right Result at the Right Time

No excuses needed!
