Niels Malotaux

Delivering
Quality On Time
the Right Result
at the Right Time

- Independent Engineering and Team Coach
- Expert in helping projects and organizations to quickly become
 - More effective - doing the right things
 - More efficient - more effective in less time
 - More predictable - transparent
- **Project Rescue** (helping making ‘impossible’ deadlines possible)
- **Embedded Systems architect** (electronics/firmware)
- Project types
electronics, firmware, software, space, road, rail, telecom, industrial control, parking system

Earth Observation Instrument

- Very experienced Systems Engineers
- Using quantified requirements routinely
- 6 year pure waterfall project (imposed by ESA)
- Don't know exactly where they'll end up
- One problem: They missed all deadlines (can you help us)
- 9 weeks later: They haven't missed any deadline since
- Eventually: delivered 1 day early (instead of expected 1 year late)
- Savings: at least 40 person-year (about €6M)
- How did they do that ?

10 min ... Convincing the Project Manager

- **At a seminar at a happy customer**
 - We're missing all deadlines
 - One bag of money
- **One month later at the CTO:**
 - Don't put me on the training budget
 - Better on the project budget
- **Project Manager:**
 - We're doing this kind of work for 27 years
 - We're very good at it
 - What do you think you can contribute to that ?
- **Anything to achieve by the end of the week ?**
 - A status report

Time needed?	Perhaps 2 hours
How much time available ?	I'm very busy !
...?	Perhaps 4u
Wat still to do ?	Uhh... Input from 6 team-leads
How ?	Uhh...
Email ?	Uhh... Yes
Always response ?	No
Time per person ?	email, reminder, going there, status, in report
... ?	Uhh... ~1,5u per team
6 teams ?	6 x 1,5 = 9u
Will succeed, 9u in 4u ?	You go coach the team !
	Wanted to get rid of me ...

Is there a problem with proper execution ?

- Always right ?
- Always on time ?

How to save time

- Half of what we do in our work later proves not to have been needed
- If we see that before spending time on it, we can still decide not to do it
- This frees time to do the needed things even better, and still deliver on time

- Retrospectives → Prespectives

Ultimate Goal of a What We Do (for our salary)

Quality on Time

- Delivering the Right Result at the Right Time, wasting as little time as possible (= efficiently)

- Providing the customer with
 - what they need
 - at the time they need it
 - to be satisfied
 - to be more successful than they were without it
- Constrained by (win - win)
 - what the customer can afford
 - what we mutually beneficially and satisfactorily can deliver
 - in a reasonable period of time

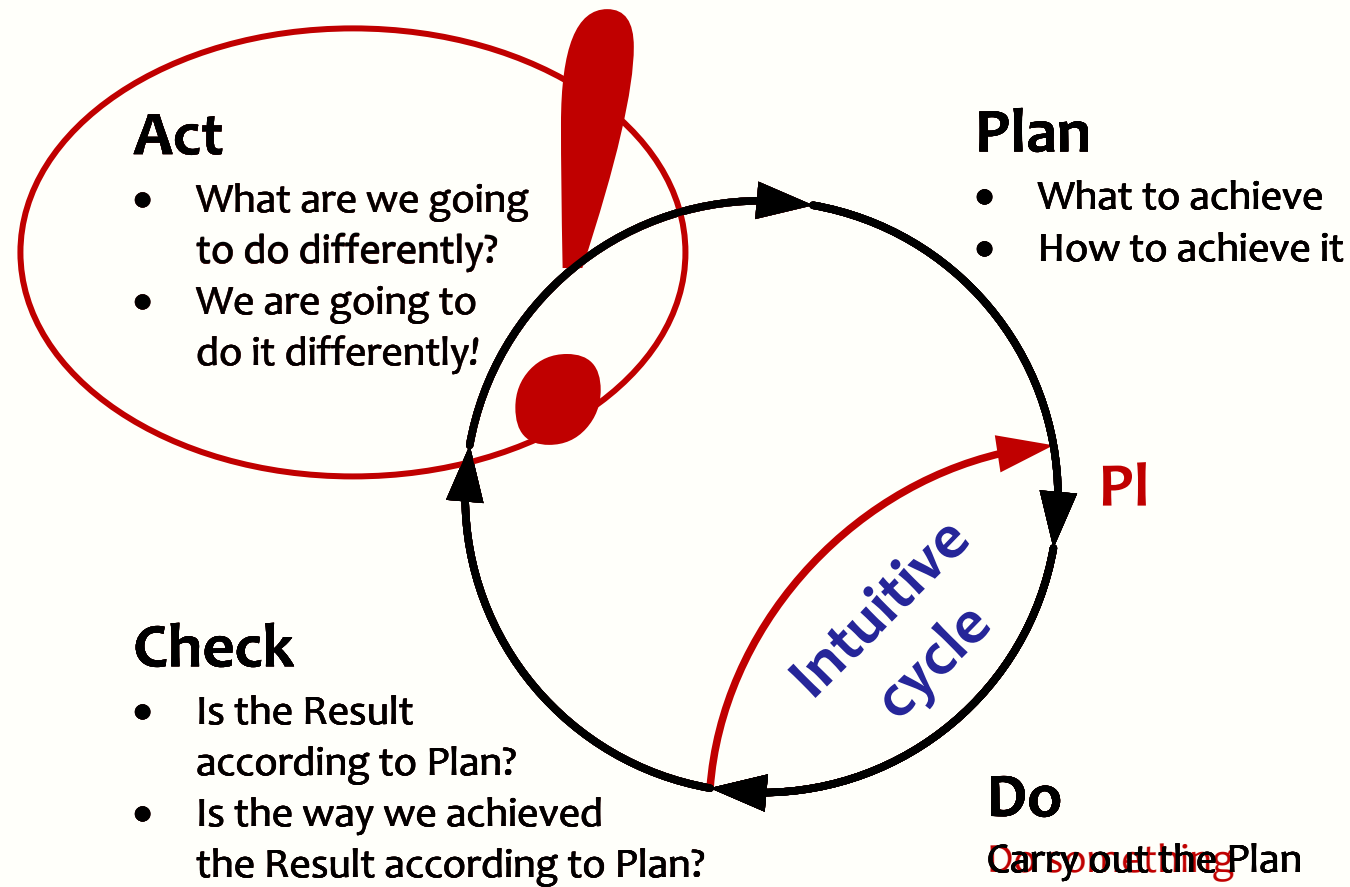

Is there a problem with proper execution ?

- Always right ?
- Always on time ?
- Anything to better do differently in your work ?

- Providing the customer with
 - what they need
 - at the time they need it
 - to be satisfied
 - to be more successful than they were without it
- Constrained by (win - win)
 - what the customer can afford
 - what we mutually beneficially and satisfactorily can deliver
 - in a reasonable period of time

The essential ingredient: the PDCA Cycle

(Shewhart Cycle - Deming Cycle - Plan-Do-Study-Act Cycle - Kaizen)

- **Plan-Do-Check-Act**
 - The powerful ingredient for success

Evolutionary Project Management elements (Evo)

Tom Gilb

- **Business Case**

- Why we are going to improve what **Why**

- **Requirements Engineering**

- What we are going to improve and what not
- How much we will improve; quantification

- **Architecture and Design**

- Selecting the optimum compromise for the conflicting requirements

- **Early Review & Inspection**

- Measuring quality while doing, learning to prevent doing the wrong things

What
How much
Are we done

How

Check and learn
as early as possible

Zero
Defects
Attitude

- **Weekly TaskCycle**

- Short term planning
- Optimizing estimation
- Promising what we can achieve
- Living up to our promises

Efficiency
of what we do

- **Bi-weekly DeliveryCycle**

- Optimizing the requirements and checking the assumptions
- Soliciting feedback by delivering Real Results to eagerly waiting Stakeholders

Effectiveness
of what we do

- **TimeLine**

- Getting and keeping control of Time: Predicting the future
- Feeding program/portfolio/resource management

What will happen, and
what will we do about it?

Evolutionary Planning - Niels

Write down:

www.malotaux.eu/Workshop

1. What are you supposed to achieve in your work ?
2. Any deadlines ?
3. What are you supposed to achieve the coming week ?
4. How much time do you have the coming week ?
5. What do you plan to do for work the coming week ? (make a list here)
6. Will all of that be done by the end of the week ?
7. How do you know ?
8. Is all of that really needed ?
9. Will you have achieved all by the end of the week ?
10. Any issues with the above or otherwise with your work or project ?

Quality On Time Right Time

Evolutionary Planning - Niels

What will happen, and what will we do about it?

Malotaux - Quality on Time www.malotaux.eu/?id=processes 72

1 - What are you supposed to achieve in your work?

2 - Any deadlines ?

3 - What are you supposed to achieve the coming week ?

4 - How much time do you have the coming week ?

5 - What do you plan to do for work the coming week? (make a list here)

		description
1		
2		
3		
4		
5		
6		
7		
8		
9		

6 - Will all of that be done by the end of the week ?

7 - How do you know ?

8 - Is all of that really needed ?

'Innocent' questions for reflection

Task _a	2	↑ do
Task _b	5	
Task _c	3	
Task _d	6	
Task _e	1	
Task _f	4	
Task _g	5	
<hr/>		
Task _h	4	↓ do not
Task _j	3	
Task _k	1	
Task _k	1	

People come in with their week plan,
come out with a modified plan,
more going to work on the right things,
less spending time on unnecessary things.
Immediate savings.
From day one.

- Really ?
- Should we ?
- Why would we do that ?
(never use 'you')
- Who's waiting for that ?
- What do they need ?
- How much do they need ?
- When do they need it ?
- Is it really necessary ?
- Is it really necessary now ?
- How do we know ?
- Why ?
- What happened ?
- What could we do ?
- Will we be on time ?
- What makes us think that ?
- What's different this time ?
- Is this the best way to do it ?
- Does it fit the available time ?
- *If there is any problem:
What-are-we-going-to-do-about-it ?*

Never challenge an estimate !
If we don't understand the estimate,
only say:

- What are you planning to do ?
- Now estimate again ...

If they insist:

- Let them find out themselves

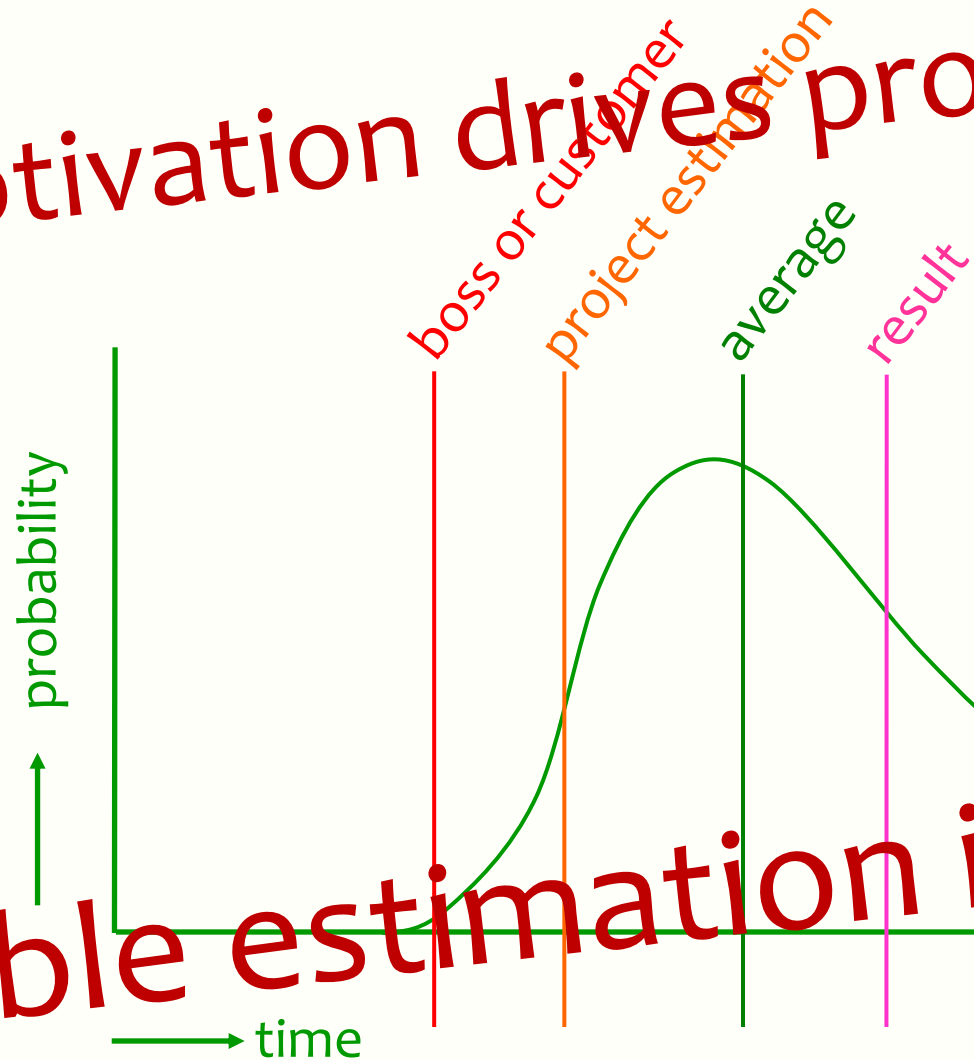

9 - Will you have achieved all by the end of the week ?

10 - Any other issues ?

Estimation Exercise

Lead time

Motivation drives productivity

Able estimation is vital

Estimation Exercise

Are you an optimistic or a realistic estimator?

Let's find out !

Project:

Multiplying two numbers of 4 figures
no computer, no calculator, just paper and pencil !

Example

$$\begin{array}{r} 0000 \\ 0000 \times \\ \hline 00000000 \end{array}$$

How much time do you need to complete this Project?

write it down !

Is this what you did?

$$\begin{array}{r} 4567 \\ 9876 \quad \times \\ \hline 27402 \\ 319690 \\ 3653600 \\ 41103000 \quad + \\ \hline 45103692 \end{array}$$

Defect rate

- Before verification ?
- After verification ?
- After validation ?

Alternative Design (how to solve the requirement)

9876
4567 x

Another alternative design

$$9876 = 10000 - 124$$

$1 \times 4567 \times 100 =$	456700	
$2 \times 4567 \times 10 =$	91340	
$2 \times 2 \times 4567 = 9134 \times 2 =$	18268	+
<hr/>		
$124 \times 4567 =$	566308	
$10000 \times 4567 =$	45670000	
$124 \times 4567 =$	566308	-
<hr/>		
	45103692	

There are usually more,
and possibly better solutions
than the obvious one

What was the real requirement?

$$\begin{array}{r} 7654 \\ 6789 \quad \times \\ \hline 51963006 \end{array}$$

Failing the validation !

Assumptions, assumptions ...

Better assume that our assumptions can be wrong.

Check !

Elements in the exercise

- Estimation, optimistic / realistic
- Interrupts
- Verification, verification strategy
- Validation
- Defect-rate
- Design, design options
- Requirements
- Assumptions

Deceptive options

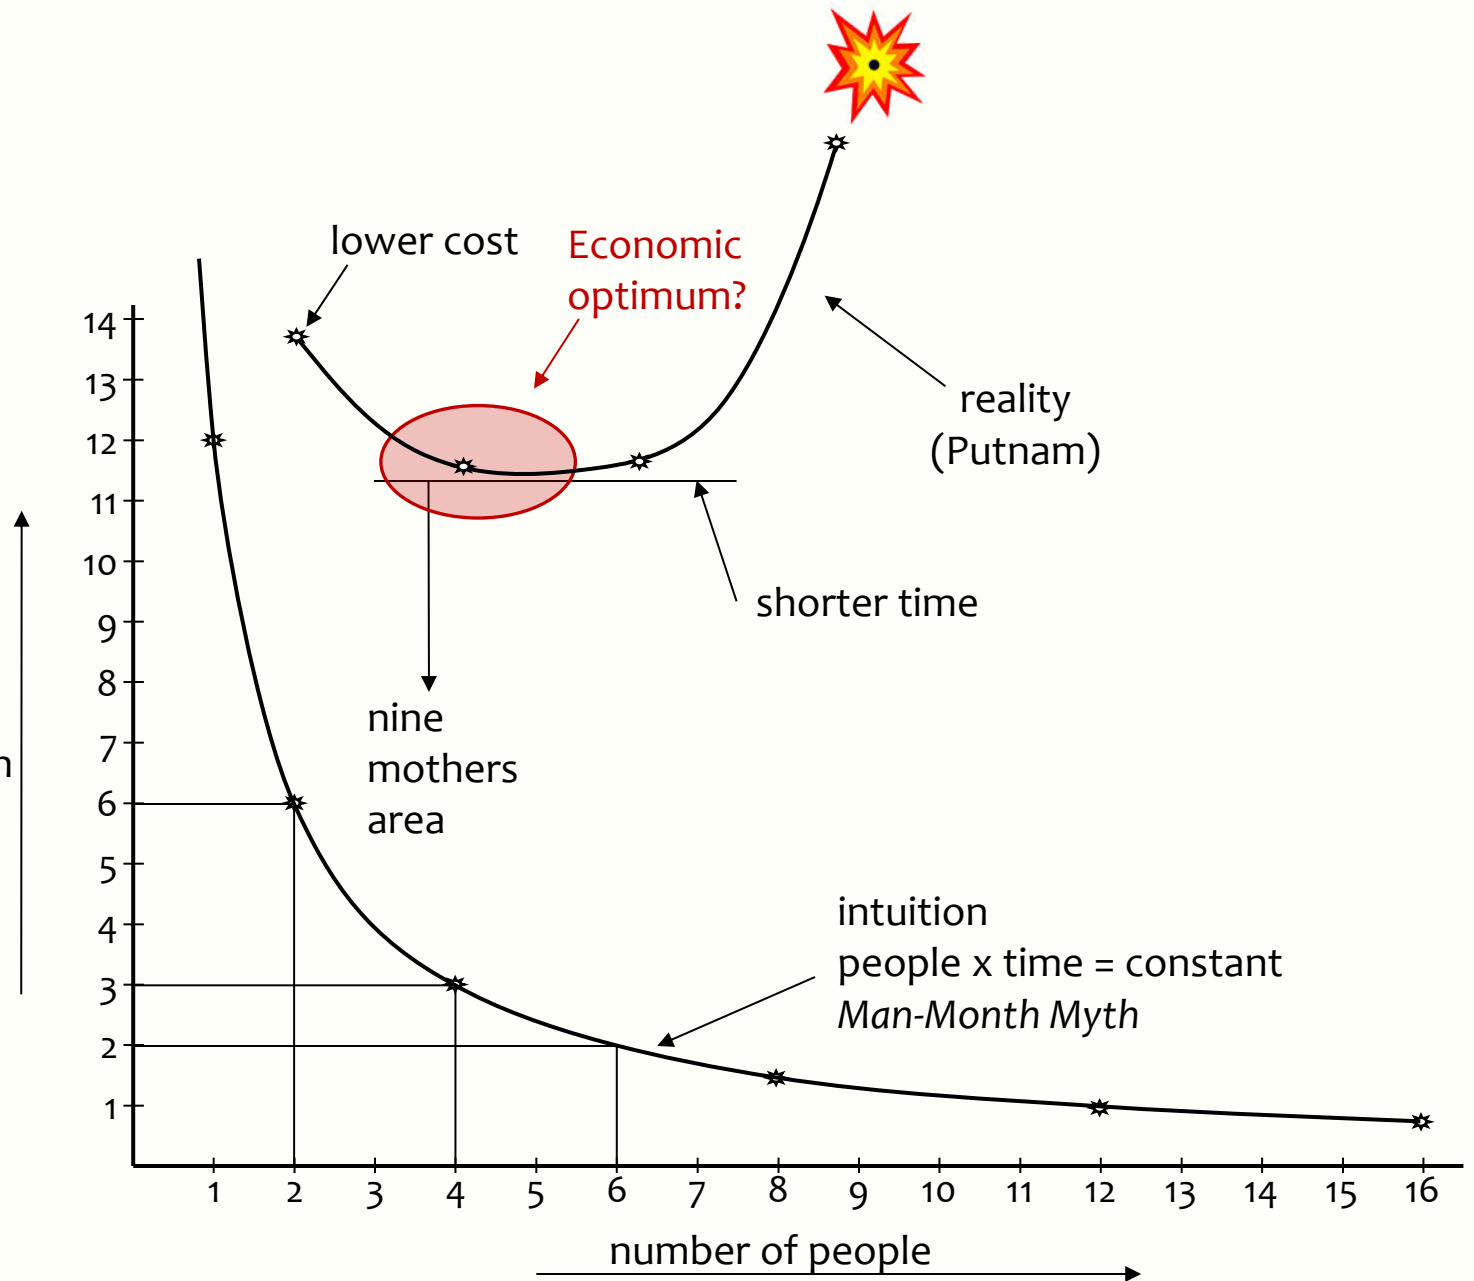

1. **Hoping for the best** (fatalistic)
2. **Going for it** (macho)
3. **Working Overtime** (fooling ourselves and our boss)
4. **Moving the deadline**
 - Parkinson's Law
 - Work expands to fill the time for its completion
 - Student Syndrome
 - Starting as late as possible, only when the pressure of the FatalDate is really felt

5. Adding people

duration

Brooks' Law (1975)
Adding people to a late project makes it later

6. Saving time

Continuous
elimination of waste
(www.malotaux.eu/essenceoflean)

We don't have enough time,
but we can save time *without negatively affecting the Result !*

- **Efficiency in *what (why, for whom) we do*** - doing the right things (www.malotaux.eu/evo)
 - Not doing what later proves to be superfluous
- **Efficiency in *how we do it*** - doing things differently (www.malotaux.eu/designlog)
 - **The product**
 - Using proper and most efficient solution, instead of the solution we always used
 - **The project** (www.malotaux.eu/projectmanagement)
 - Spending less time, instead of immediately doing it the way we always did
 - **Continuous improvement and prevention processes** (www.malotaux.eu/PDCA)
 - Constantly learning doing things better and overcoming bad tendencies
- **Efficiency in *when we do it*** - right time, right order (www.malotaux.eu/timeline)
- **TimeBoxing** - much more efficient than FeatureBoxing (www.malotaux.eu/timeboxing)

Weekly TaskCycle

- What are we supposed to achieve
- How much time do we have available
- 2/3 of gross available time is net plannable time
- What is most important to do in order to achieve what we're supposed to achieve
- Estimate net effort needed to do these things
- Which most important things fit the net plannable time (default 2/3 of gross available time, 26 hr per week at 40hr work-week)
- What can, and what are we going to do
- What are we *not* going to do
- Write it down ! Our fuzzy mind isn't good enough !

2/3 is default start value
this value works well with development work

EDU QUA SE-TRAINING

Task _a	2	↑	do
Task _b	5		
Task _c	3		
Task _d	6		
Task _e	1		
Task _f	4		
Task _g	5		
26			
Task _h	4	↓	do not
Task _j	3		
Task _k	1		

Every week: reflecting and prelecting

- Was all planned work really done ?
- If a Task was not completed, we learn:
 - Time spent but needed more time ? → effort estimation problem
 - What did I think then, what do I know now → learn (Check and Act)
 - Time not spent? → time management problem
 - Too much distraction
 - Too much time spent on other (poorly-estimated) Tasks
 - Too much time spent on other things
- Close unfinished Tasks after having dealt with the consequences
 - Feed the disappointment of the “failure” into your intuition mechanism
 - Define remaining Tasks, and put on the Candidate Task List
 - Declare the Task finished after having taken the consequences
- Continue with planning the Tasks for the next week

Immediate consumption of metrics

Task _a	2	↑
Task _b	5	↑
Task _c	3	↑
Task _d	6	do
Task _e	1	↑
Task _f	4	↑
Task _g	5	26
Task _h	4	↓
Task _j	3	do
Task _k	1	not

TimeLine: Result to Tasks, and back

TaskCycle Analysis
(retrospective)

learning

TaskCycle Planning
(presepective)

From 60hr to 26hr, delivering better results

- One of three in a team insisting to work 60 hr the next week
- That probably won't all be done by the end of the week, right ?
- “Yes, but it >has< to be done !”
- Isn't that bad for your health? The others nodded
- After a long discussion, he gave in: planned 26 effort hours for that week
- Few weeks later he took me apart:

Niels, thank you !

I was nuts, getting tired spending so many hours

Now, every week I plan 26 net hours,
getting done *more than ever before*

No excuse anymore !

- Delivering the Right Results at the Right Time isn't really difficult
- I showed you some examples of how to do it
- No complaining or excuses: *What are we going to do about it ?!*
- Want to learn more detail ?
 - 2-day course, 9 - 10 March, Zürich

Optimizing Project Execution

- Importance of time
- Human behavior affecting our performance
- Good enough estimation isn't difficult
- Project life-cycles
- Evolutionary planning
- Stakeholders & requirements
- Selecting priorities
- Architecture and design
- Examples
- Exercises on your own situation

Active Synchronization

Somewhere around us, there is the bad world.

If we are waiting for a result outside our control, there are three possible cases:

1. You are sure they'll deliver Quality On Time
2. You are not sure
3. You are sure they'll not deliver Quality On Time
 - If you are not sure (case 2), better assume case 3
 - From other Evo projects you should expect case 1
 - Evo suppliers behave like case 1

In cases 2 and 3: **Actively Synchronize: Go there !**

1. Showing up increases your priority
2. You can resolve issues which otherwise would delay delivery
3. If they are really late, you'll know much earlier
